Raymarine®

ST70 pilot controller software v3.x. Latest features

⚠️ **Warning: Read the user manual**

Before using the software read the safety information contained within the user reference manual on the CD-ROM supplied with your product.

⚠️ **Warning: Ensure safe navigation**

This product is intended only as an aid to navigation and must never be used in preference to sound navigational judgment. Only official government charts and notices to mariners contain all the current information needed for safe navigation, and the captain is responsible for their prudent use. It is the user's responsibility to use official government charts, notices to mariners, caution and proper navigational skill when operating this or any other Raymarine product.

ST70 pilot controller latest features

This document describes features which have been added to the ST70 pilot controller with software version 3.x.

Note: Please note that the documentation supplied with your unit is still valid. The latest version of any user documentation can be downloaded from www.raymarine.com.

New features

- **Brightness adjustment**. The brightness is now adjusted in 10% increments, with fine adjustment also available.

- **System brightness and color**. The **Display settings** menu has been updated with a new System brightness and color feature. This allows the ST70 brightness and color settings to be shared with connected ST70 and ST70+ units.

- **Color palettes**. The color palettes have been enhanced to include a Red/Black palette for night time use and an inverse palette for enhanced visibility.

- **Language support**. Finnish, Polish and Portuguese have been added to the languages supported within the user interface.

- **Tiller pilot "jog"**. The controller now supports the autopilot jog feature. This allows the drive pushrod to be extended when connecting to the tiller.
